## PRESSURE SEQUENCE VALVE SPOOL TYPE, HI-LO PRESSURE SEQUENCE.

### DESCRIPTION

This unit is a DIRECT ACTING, SCREW IN CARTRIDGE STYLE, SPOOL TYPE, ADJUSTABLE, SOFT SHIFT (shock free), HYDRAULIC HI-LO PRESSURE SEQUENCE VALVE.

### OPERATIONS

This valve blocks flow from port #2 to port #1 until sufficient pressure is present at port #3 to force the differential area spool to shift thus opening the valve very gradually and without any shock. This valve is used in a two pump circuit to load and unload low press. high volume pump, from a high press. low volume pump pressure signal.

### FEATURES AND BENEFITS

Leakproof screw adjustment.  
Adjustment screw can not be backed out of the valve.  
Overset protection – spring can not go solid.  
Hardened precision fitted spool & cage provides reliable, long life.  
A unibody cage construction provides very low hysteresis, dependable and reliable operation.  
All external carbon steel parts are plated for longer life against the elements.  
Valve is available with screw, tamperproof, capped and handknob adjustments.  
All cartridge valves are 100% functionally tested.  
Industry common cavity.
